Ezekiel Galauran

CS Student & Software Developer

ezekielgalauran@gmail.com · linkedin.com/in/ezekiel-galauran · github.com/apcedgalauran

I build full-stack web applications and take them all the way to production.

EDUCATION

BS Computer Science, Software Systems

August 2023 – August 2027 (expected)

Asia Pacific College, Makati City

Honor's List — AY 2023–2024, 2024–2025

Relevant coursework: Cybersecurity, Database Management, Systems Analysis & Design, Threat Detection Analysis, Software/System Development

Certification: OCI 2025 AI Foundations Associate — Oracle, November 2025

EXPERIENCE

Optum — Student Advocate Program

November 2026 – Present

Intern, Early Careers

Started November 5, 2026.

APC × NAMFREL — 2026 BARMM Parliamentary Elections

September 2026

Production deployment, DevOps & Infrastructure

Set up the production deployment of the live election-analytics portal for APC's NAMFREL Election Data Analytics Center, and served as the deployment contact for the 2026 BARMM Parliamentary Elections.

- Created the Vercel project on the school's Vercel team, with access and approval from the web development team head. Connected the GitHub repository and configured the production environment variables, including the Supabase database connection.
- Served as the deployment contact for the web development team head: kept the live site synced with the latest commits on main and confirmed each sync.
- Enabled Vercel's built-in Web Analytics when the team asked for it.
- Shipped 13 production deployments on September 14. When teammates' merged commits were blocked on the team's Vercel plan, I deployed their changes through trigger commits from my authorized account.
- Verified each production deployment during my shift. A teammate took over deployment on September 15, when I was unavailable.

Team context: The domain and DNS were set up by others, and the CI pipeline, caching and Playwright automation were teammates' work.

PROJECTS

Dorotheo Dental Clinic Management System

March 2025 – March 2026 · Preparing for clinic rollout

Client system · Team of 5 · Project Manager & Full-Stack Developer

A multi-portal platform for a real dental practice — patients, staff, and the clinic owner — covering scheduling, clinical records, billing, inventory, and an AI chat assistant, with every change to patient data audited.

- Led a five-person team as Project Manager and full-stack developer
- Django REST backend: 26-model schema, 27 serializers, append-only audit trail
- Deployed across Vercel, Railway, and Azure

Django · Django REST Framework · PostgreSQL · Supabase · Next.js 15 · TypeScript · shadcn/ui · Redis · Resend · Sentry · Azure Blob Storage · Docker

Motor Tool & Sub-Component Pumping Hour Tracking System

March 2026 – present · In production use

Independent project · Sole developer

Field technicians constantly move sub-components between motors, so no one could tell how many hours an individual part had run. This system tracks each part's lifetime pumping hours across every motor it has been assembled into.

- Built, deployed, and maintain it alone; used by field technicians in Abu Dhabi
- Transactional hour cascade from each motor to its assembled parts
- Next.js and Prisma on Vercel, with Neon Postgres in the same region

No public link or screenshots, because the application holds live company data.

`Next.js 15 · React 19 · TypeScript · Prisma · Neon Postgres · NextAuth · Vercel Blob · pdf-lib · Tailwind CSS · Vitest`

E-ksena: Deployment & CI/CD

Project

Team project · Deployment owner · Deployment & CI/CD

I built the team's Azure DevOps pipeline (build, test, deploy). I was not a developer on the application itself.

- Backend on Railway and frontend on Vercel, deploying automatically from GitHub
- Diagnosed and documented fixes for 12 build and deploy failures in an Azure DevOps pipeline
- Wrote a handover guide so the environment could be rebuilt

`Railway · Vercel · GitHub · Azure DevOps · Windows Server · IIS`

XLM-JUD: Dialect-Aware Smishing Detection

Completed

Undergraduate thesis · Co-author, research and writing

Smishing detection in the Philippines is hampered by scarce, imbalanced datasets and by Tagalog, Cebuano, and Ilocano text that English-trained filters misread.

- Co-authored the paper, helped interpret the results, and handled dataset-related tasks as the team needed.
- Original XLM-RoBERTa: accuracy 98.61%, Macro-F1 0.9849, MCC 0.9698
- XLM-JUD: accuracy 98.19%, Macro-F1 0.9802, MCC 0.9606
- Classical baselines: Macro-F1 0.9373–0.9561
- Back-translation did not improve classification (210 vs. 161 errors; McNemar's test $p < 0.001$), and SMOTE lowered classical-model performance.

`Methods: Python · XLM-RoBERTa · Meta NLLB-200 · FLORES-200 · SVM and Logistic Regression (TF-IDF) · SMOTE`

LEADERSHIP

Vice President, APC Band — Jul 2026 – Present

Internal Vice President, APC Microsoft Community (APC-MSC) — Nov 2025 – Jun 2026

Executive Director of Events and Programs, APC Microsoft Community (APC-MSC) — Nov 2024 – Jun 2025

Assistant Director of Operations, JPCS – APC — Nov 2024 – Jun 2025

Speaking & hosting

- Speaker, Microsoft Sandbox: Building Your Startup with Microsoft 365
- Speaker, SoCIT Officer Workshop 2025
- Host, Microsoft Learn Student Ambassador event
